

Alexander Urs-Badet

Full-Stack Software Engineer | Angular · AWS · Node.js

Lynnwood, WA | (425) 678-5591 | alexanderursbadet@gmail.com | [LinkedIn](#) · [Portfolio](#) · [GitHub](#)

SUMMARY

Full-stack engineer who spent 2.5 years on the Angular/AWS systems that 1,500+ USDA Farm Service Agency staff and applicants use to process federal farm loans: production forms, financial calculators, and legacy Java/Struts modernization at 98% Jest coverage on the modules I owned. Previously adjudicated for USDA Public Trust. Available immediately.

TECHNICAL SKILLS

Frontend	Angular, React, TypeScript, JavaScript, HTML/CSS, Tailwind CSS
Backend & Cloud	Node.js, Python, Java, Spring Boot, C#, AWS (Lambda, S3, API Gateway), REST APIs, SQL
Delivery	Git, CI/CD, Jest, unit testing, code review, Agile/Scrum
Systems	WebSockets, asyncio, SQLite, network protocols, reverse engineering
AI / ML	PyTorch, TensorFlow, scikit-learn, OpenCV, DeepLabCut
Specializations	Form-heavy Angular apps, financial calculators, legacy migration (Struts to Angular + Spring Boot/Hibernate), real-time systems

PROFESSIONAL EXPERIENCE

Software Engineer | TSPi | Lynnwood, WA · 11/2023 – 07/2026

- Owned the Angular loan workflows running in production for 1,500+ FSA loan officers and applicants across the U.S. Farm Service Agency.
- Architected and deployed a financial optimization calculator (AWS Lambda, Node.js, Angular) that cut manual calculation overhead by 40%.
- Modernized a 10+ year-old Java/Struts application into Angular front ends and Spring Boot/Hibernate services, preserving 10,000+ unit tests at 98% Jest coverage on modules I own.
- Developed features for a nationwide debt-consolidation system presented to senior FSA and congressional stakeholders.
- USDA Public Trust: favorably adjudicated (prior contractor position).

Software Engineering Intern | T-Mobile | Bellevue, WA · 07/2021 – 08/2021, 07/2022 – 08/2022

- Optimized core sorting and data processing in the Sync-Up product; achieved 50% runtime reduction.
- Mentored 2 junior interns in Python; both shipped 2 projects independently.

PROJECTS

Listing Studio · Next.js, React, TypeScript, PostgreSQL, OAuth

Built a full-stack commerce workspace end to end, including auth from scratch: opaque hashed database-backed sessions, owner bootstrap, and single-use recovery with full revocation.

Integrated Etsy and YouTube OAuth with PKCE and AES-GCM-encrypted refresh tokens under versioned keys, behind one persistence boundary (SQLite locally, Neon Postgres in production).

A&D Home Care & Aging with Grace AFH · React, TypeScript, Cloudflare Workers

- Designed, built, and deployed the live site for two licensed Washington adult family homes, from owner requirements and photography through a custom-domain launch on Cloudflare Workers.
- Built three pre-rendered routes with technical SEO (per-route metadata, JSON-LD, sitemap), plus an owner-managed availability API on a Cloudflare Worker with validation, edge caching, and fail-safe fallbacks.

Fail-Closed Trading Risk Engine · Python, Options, IBKR API, WebSockets

- Built an intraday options system with pluggable signal engines and a walk-forward backtester, then rebuilt it risk-first as a paper-only IBKR bot: fail-closed entry gates, durable loss latches, native combo orders, and a reproducible evidence bundle.

Real-Time Tracking & Robot Control · Python, OpenCV, Kalman Filters, Robotics

- Built a threaded 30 FPS OpenCV pipeline (LAB/HSV segmentation, morphology, contour centroids) with per-object constant-velocity Kalman filters, gated association, and occlusion handling, closing the loop onto a mobile robot.

EDUCATION

- B.S. Psychology · University of Washington, Seattle · In Progress
- A.A. & Full Stack Developer Certificate · Edmonds College, Edmonds, WA · 2022–2023
